

# KOOTENAY CONTRAPTION CONTEST INDIVIDUAL FORM

Calling all kids in grades K-8. GLOWS challenges you to come up with the most creative, most imaginative “contraption” you can dream up to solve this problem:

The year is 2050. The climate plan to significantly reduce greenhouse gas (GHG) emissions by now was unsuccessful. The global temperature has increased and more frequent and intense droughts, storms, heat waves, rising sea levels, melting glaciers and warming oceans are harming animals, destroying the places they live, and negatively impacting people’s health, livelihoods and communities. What contraption will you create to help improve your life in this new warmer climate?

Draw or illustrate your idea in the box. If using a digital media, please indicate it below.
