

Kootenay  
**CONTRAPTION**  
Contest 

Calling K to Gr. 8 students! KAST Youth challenges you to dream up a “contraption” that solves this problem:

*The year is 2100 and, astonishingly, the sun has unexpectedly begun to die, exhausting its hydrogen core 5 billion years early! It is now expanding into a giant red star, consuming Venus and Mercury and forcing the earth into intense heat, affecting the oceans and turning land uninhabitable by the current humanity as we know it. Create a contraption to enable humans, animals and life to exist in this new world.*
